

INOX MECCANICA

TECHNOLOGY FOR THE FOOD PROCESSING INDUSTRY

Since more than 25 years we design and build machinery and equipment for meats and sausages processing and packing.

Inox Meccanica was established over 25 years ago in an area that could be called the "taste triangle", between Mantua, Bologna and Parma.

The company has grown steadily over the years, following the expansion of the reference markets. Improvements have been continuously made to the products that are both highly reliable and of excellence quality. Important new technologies such as vacuum salting system, industrial washing plants, automatic packing machines and the use of clips, loops and other exclusive materials have been added to the traditional automatic stuffing and clipping machines.

The true heart of the company is its technical and engineering department which gathers the information and requirements from sales and marketing and then comes up with ever more advanced answers to the growing needs of the food industry.

Sales dept. of Inox Meccanica is placed inside the factory and here comes all request and inquiry from all over the world; they are studied by a design bevy and checked by others dept; so that's not a random centralization, but strongly organized in order to shorten the control chain, in order to check in the best way every single moment of customer's relationship (It doesn't matter where its headquarter is). In this way, every step will be organized in the best way for quality and efficiency.

Inox Meccanica's goal is to excel: in product quality, in service, in applied technology and in expertise of our patners. Customer satisfaction, the real wealth of the company, and our golden rule is "do it together and do it more and better!"

Our production range:

- industrial washing machines for equipment and sausages
- automatic clipping machines
- stuffing-forming-pressing machines for sausages and meat
- automatic lines for sausages forming, stuffing and clipping
- automatic lines for sausages clipping and stuffing
- net and casing loaders
- automatic tying machines for sausages
- automatic binding machines for sausages
- presses for meat
- automatic vacuum tumblers
- elevator-tipper for tumblers
- mixers for salt and spices
- tender machines
- consumers goods such as clips, loops and edible vegetable films.
